

Part 1. Report Cover

Report Number: DLAW001

Report Date(s): 6 Sep 01

Previous Report Number: 99AYP017

Previous Report Date: 22 Sep 99

Title: Performance Oriented Packaging Testing of a PPP-B-601,
Style A, Cleated-Plywood Box Without Skids, 12½" x 12½" x 12½"
(ID), Containing Packaged Solids (76 lb Gross)

Responsible Individual: Francis S. Flynn

Performing Activity: LOGSA Packaging, Storage,
and Containerization Center
ATTN: AMXLS-T
11 Hap Arnold Boulevard
Tobyhanna, PA 18466-5097

Performing Activity's Reference(s): 9HTRR; TE 35-97;
AMC 13-88

Report Type: Interim Final

DTIC Distribution: N/A

Requesting Organization:

Defense Logistics Agency
Defense Distribution Center
ATTN DDC J-3/J-4-0
2001 Mission Drive
New Cumberland PA 17070-5000

Requesting Organization's Reference(s):

DLA Memo, 6 Dec 00

Test Results: ____ single X combination ____ composite

Section I. Pre-test Conditions

For initial testing, one box was received in new condition, from Defense Distribution Region East, Susquehanna West, Container & Fabrication Branch, Mechanicsburg, PA

The following identification schema designates the packaging specimen used for the test(s) indicated.

| <u>Specimen No.</u> | <u>Test</u> |
|---------------------|---------------------------------|
| A | stack test |
| A | repetitive-shock vibration test |
| A | flat onto bottom, drop test |
| | flat onto top, drop test |
| | flat onto long side, drop test |
| | flat onto short side, drop test |
| | bottom corner, drop test |

Section II. Summary

| | | |
|---|------|-------------|
| A. Drop test - 1.8 m (PG II solids) | | PASS |
| flat onto the top (face 1) | PASS | |
| flat onto the bottom (face 3) | PASS | |
| flat onto long side (face 4) | PASS | |
| flat onto short side (face 6) | PASS | |
| bottom corner (5-2-3) | PASS | |
| B. Leakproofness test - | | |
| restrained under water/soap over seams | | N/A |
| C. Internal pressure test/Hydrostatic pressure test (liq.) - | | N/A |
| D. Stacking test - static load, 2,000 lb, 24 hr | | PASS |
| E. Vibration standard - repetitive-shock, rotary motion | | |
| 4.06 Hz., 1 hr | | PASS |
| F. Water resistance test (fiberboard box) - | | N/A |
| G. Compatibility test (liq. in plastics) - | | N/A |

Test Results (continued)**Section III. Discussion****A. Drop test:** 49 CFR §178.603

- ☐ cold conditioned (0° F, 72 hr)
☒ ambient conditions (~72° F)
☐ standard conditions (50% RH & 23° C)

| No. | Ht. | Orientation | Results |
|----------------|-------|---|--|
| A ¹ | 1.8 m | Flat onto box top (1) | Pass/No leaks/rupture; entire contents retained |
| A ¹ | 1.8 m | Flat onto box bottom (3) | Pass/No leaks/rupture; entire contents retained |
| A ¹ | 1.8 m | Flat onto box long side (4) | Pass/No leaks/rupture; entire contents retained |
| A ¹ | 1.8 m | Flat onto box short side (6) | Pass/No leaks/rupture; entire contents retained |
| A ¹ | 1.8 m | Diagonally onto bottom joint corner (5-2-3) | Pass/No leaks/rupture; minor crushing of the 5-2-3 corner; contents retained completely within the box |

For each orientation for the drop test, a free fall drop plate, 10 x 10, set for 1.8 meters (71 in.), was used. The impact surface was a steel plate.

In conducting the drop test, all five drops (flat top, flat bottom, flat long side, flat short side, and bottom corner) were performed on the same configuration. The decision to use the same container (configuration) for all five drop orientations was based on the relatively minimal damage demonstrated during previous testing of plywood boxes with different inner containers or articles. Five drops per configuration exceeds 49 CFR §178.603 requirements, as well as both UN and ASTM recommendations (i.e., one drop on a side or corner per box). The use of one configuration for multiple tests and drops is DOD policy as stated in DLAD 4145.41/AR 700-143/AFJI 24-201/NAVSUPINST 4030.55A/MCO 4030.40A, Packaging of Hazardous Material. Also per this policy, any failed orientation(s) can be repeated using another configuration.

B. Leakproofness test: 49 CFR §178.604

N/A. The leakproofness test was not conducted on the box, because the packaging is not intended for the containment of liquids.

C. Internal Pressure/Hydrostatic Pressure test: 49 CFR §178.605

N/A. Testing for the maintenance of internal pressure is not required for configurations of solids.

Test Results: Section III (continued)

D. Stacking test: See 49 CFR §178.606.

- ☐ standard conditions (23° C & 50% RH)
☒ ambient conditions (~72° F)
☐ high temperature conditions (104° F)

| No. | Length | Type | Load/Force | Peak Force | Results | Stability Maintained? |
|----------------|--------|--------|------------|------------|---------|-----------------------|
| A ¹ | 24 hr | Static | 2,000 lb | N/A lbf | Pass | Yes |

A static top load (2,000 lbs) was used for the stack test, because it could hold the load constant for the required 24-hour timeframe. The total top load to be applied was greater than the minimum required for one box based on the outside box height and the gross packaged weight. The top load was to simulate a stack of identical packagings that might be stacked on the packaging during transport.

E. Vibration test: See 49 CFR §178.608.

| No. | Frequency | Duration | Results |
|----------------|-----------|----------|--------------------------------------|
| A ¹ | 4.06 Hz | 1 hr | Pass. No leakage, rupture, or damage |

To be in compliance with U.S. Department of Transportation standards for packagings bearing the United States mark (USA) as a component of the packaging certification marking (49 CFR §173.24a(a)(5)), the vibration test was performed, as a means to determine capability. The test was conducted as prescribed by ASTM D 999, method A2 (Repetitive Shock Test (Rotary Motion)). The test was run for 1 hour, using the plywood box packaging. The packaging was tested using a 2,000-lb vibration table (rotary motion) that had a 1-inch-vertical double amplitude (peak-to-peak displacement) such that the packaging was raised from the platform to such a degree that a piece of steel strapping (1.6 mm) could be passed between the bottom of the package and the platform.

F. Water resistance (Cobb Method) test (fiberboard): N/A

G. Compatibility test (plastics packagings only): N/A.

Note 1. Specimen A, a packaging consisting of a plywood box with a PPP-B-636 fiberboard box, 12" x 12" x 12" (ID) inside.

Test Personnel

The personnel who performed the aforementioned testing, or had a role in the testing, evaluation, and/or documentation, as reported herein-

Richard D. LaFave, Samuel Baroody, Bruce W. Samson, Timothy L. Reimann, James D. Mott, and Karen K. Kimsey

Equipment

| Item | Manufacturer | Serial No. | Calibration |
|------------------------------|---------------------------------------|---------------|--------------------|
| | | | Expiration Date |
| 2,000-lb vibration table | L.A.B Skaneateles, NY | G23605 | <i>see note</i> |
| 30,000-lb compression tester | Gaynes Engr. Co. Franklin Park, IL | G20950 | 4/02 |
| release hook | Gaynes Engr. Co. Franklin Park, IL | 18211-1 | N/R |

Note. Equipment is calibrated in accordance with International Safe Transit Association test equipment verification requirements.

Appendix A

Test Applicability

Pass/fail conclusions were based on the particular box specimens, test loads, and the limited quantities submitted for test. Extrapolation to other materials, other manufacturers, other applications, different inner packagings, container sizes, or lesser inner quantities is the responsibility of the packaging design agency or applicable higher headquarters. Extrapolation of test results based on less than the minimum recommended number of test specimens is also the responsibility of the packaging design agency or applicable higher headquarters.

Reference to specification materials has been made based either on the information provided by the requester, the manufacturer, or the markings printed on, attached to, or embossed on the packagings. It was not possible to identify the exact composition of the box construction materials.

Testing was performed per *Title 49 Code of Federal Regulations*.

Performance testing was undertaken and completed at the request of an agency responsible for shipment of the dangerous good(s). The completion of successful required performance tests does not, by itself, authorize the marking and transportation of the dangerous good(s). Applicable modal regulations should be consulted concerning the relationship of performance testing completed and the dangerous good(s).

The required performance tests are intended to evaluate the performance of the packaging components. The criteria used to evaluate packaging performance is whether the contents of the packaging are retained within the outer packaging, should damage to the outer packaging occur, and secondly, if any inner packaging of hazardous materials leaks, ruptures, or is damaged so as to affect transportation safety. The successful completion of the required tests does not ensure the undamaged delivery or survivability of the actual commodity/item. Separate testing is necessary to assure the stability of any explosive item.

Before a configuration can be certified by the person(s) authorizing shipment, the appropriate packaging for the particular hazardous materials and mode of transportation must be determined, and the item(s) must be prepared for shipment per applicable regulations. The chosen configuration must have been performance tested in accordance with the size, the shape, and the weight constraints posed by the configuration to be certified. The testing reported herein

should not be construed as blanket certification of any configuration which simply uses the performance tested outer box. Packaging paragraphs apply.

Appendix B

Test Data Sheet

Section I. Test Product

Physical State: X solid liquid gas aerosol

Test Product(s) Used: Five, BA-358U batteries, 9" x 6?" x 4 $\frac{3}{4}$ ", 50 lbs (10 lbs ea); three, BA-270-2 batteries, 7 $\frac{3}{4}$ " x 2 $\frac{3}{4}$ " x 2 $\frac{1}{2}$ ", 8 lbs (2.67 lbs ea)

Amount Per Container:

Item Weight-- 58 lbs.
Tare Weight-- 18 lbs.
Gross Weight-- 76 lbs.

Section II. Test Parameters

Drop Height: Ref: 49 CFR §178.603

 X 1.8 m; 71 in. (PG I, II, & III, SG =1.2 or solids)
 1.2 m; 47 in. (PG II & III, SG =1.2 or solids)
 0.8 m; 32 in. (PG III, SG =1.2 or solids)
 from-- PG I: SG x 1.5 m x 39.37 in.
 PG II: SG x 1.0 m x 39.37 in.
 PG III: SG x 0.67 m x 26.38 in.

Stacking Weight Formula Solids

| Variables | Inputs | | |
|--------------------------|--------|--------|-----|
| h height, drum/box | 15 | | |
| n # stacked containers | XXXXXX | 7.87 | |
| w gross packaging weight | 76 | | |
| A Stacking weight | XXXXXX | 521.12 | 523 |

NOTE: $A=(n-1)*w$

A=applied load in pounds

$n=(118/h)$, minimum number of containers that when stacked, reach a height of 3m

w=maximum weight of one packed container in pounds

Appendix C

Packaging Data Sheet

Section I. Exterior Shipping Container

Packaging Category: ☐ single ☒ combination ☐ composite

UN Type: Plywood boxes (49 CFR §178.514) UN Code: 4D

Specification No.: PPP-B-601; Style A; Cleated plywood box without
skids; 17 lbs.; 12½" x 12½" x 12½" (ID); 15" x 15" x 15" (OD)

Manufacturer: Department of Defense, Defense Distribution Region
East Susquehanna, West Container Fabrication Branch, Mechanicsburg,
PA 17055

Date(s) of Manufacture: March 2001

Closure Method: The outer plywood box was sealed using 8 penny cement
coated sinkers. The box was then banded with ¾" x .023" flat steel
strapping; 2 lengthwise and 2 girthwise. (See drawing)

Static Electricity Protection: N/A

C-1

Appendix C (Continued)

Section II. Interior Packaging

Quantity of Inner Containers: One, PPP-B-636 fiberboard box,
12" x 12" x 12" (OD)

Cushioning: N/A

Box Specification: ASTM D5118, RSC, Singlewall, Domestic

Box Closure: Tape, pressure sensitive adhesive, seven strip method

Closure Specification: PPP-T-60 tape, 2 inch wide

Drawing

| ITEM | DESCRIPTION | W001 |
|------|--|------|
| 1 | FIBERBOARD BOX, DOMESTIC, SINGLEWALL, 12 x 12 x 12 IN. (OD) SEALED WITH PPP-T-60, 2 IN. P/S TAPE, SEVEN STRIP METHOD | |
| 2 | PPP-B-601, STYLE A, CLEATED-PLYWOOD BOX 12-1/2 x 12-1/2 x 12-1/2 IN. (ID) | |
| 3 | ¾ x .023 IN. STEEL STRAPPING, FLAT, TYPE 1 REGULAR DUTY, FINISH A, IAW ASTM D 3953, 2 GIRTHWISE, 2 LENGTHWISE BANDS | |
